Lithium back on investors' screens

Mineral Resources (ASX:MIN) recently announced that it has commenced a process to sell up to 49% of its world-class 100%-owned Wodgina Lithium Project as part of an offtake and partnering process. Wodgina, 100km south of Port Hedland in WA's Pilbara region, is the world's largest hard rock lithium deposit with an upgraded (April 2018) Mineral Resource of 233Mt @ 1.21% Li₂O and a Probable Reserve of 142.4Mt @1.19% Li₂O. The divestment process follows a significant number of unsolicited approaches to MIN from interested parties including lithium processors, battery manufacturers, international trading companies, and automakers expressing interest in securing a direct investment in the project and/or offtake rights.

The move adds to a flurry of merger and acquisition activity in the domestic lithium sector. Galaxy Resources (ASX:GXY) is looking to sell a stake in its Sal de Vida Lithium and Potash Brine Project in Argentina, Altura Mining (ASX:AJM) is in discussions with a major Chinese shareholder regarding a potential control transaction, and emerging lithium producer Tawana Resources (ASX:TAW) - owner of the Bald Hill Lithium Project in WA - and Singapore-listed Alliance Mineral Assets (SGX:40F) are in merger negotiations.

Press reports state that analysts are speculating that Wodgina could be worth more than A\$3.6bn based on the updated Resource, the pathway to downstream processing and recent valuations for nearby lithium projects at Pilbara Minerals (ASX:PLS) and Altura Mining. A project value of A\$3.6m implies a Resource value of A\$15/t. Applying this unit value to the Mt Marion Resource (77.8Mt@ 1.37% Li₂O), we calculate NMT's 13.8% interest in Mt Marion at some A\$165m. This is some 63% above our current valuation of A\$101m (~A\$0.18 per share), and points to the project's upside potential.

In addition, we note that NMT is making good progress with its WA Lithium Hydroxide Project, which looks to beneficiate 6% spodumene concentrate - sourced initially from Mt Marion - to higher value lithium hydroxide. On 10 April 2018, NMT announced positive vendor test results, with 99.99% pure lithium hydroxide produced from run-of-mine concentrates using a conventional direct-conversion sulphate process. On 1 May 2018, NMT announced that engineering firm M+W Group were awarded the contract to perform the FEED Study for the Kalgoorlie Lithium Hydroxide Project. A Feasibility Study will integrate the results of the FEED Study ahead of a potential project investment decision in 1Q 2019. The Project timeline (with plant commissioning targeted for mid-2021) should allow the delivery of 10,000tpa of lithium hydroxide product into the market at a time when the demand growth for lithium is forecast to accelerate considerably. Industry analysts Roskill forecasts demand increasing from 200ktpa lithium carbonate equivalent in 2017 to 400ktpa LCE in 2020/2021 and ~800ktpa LCE by 2025.

Our current, nominal valuation for the WA LiOH Project is A\$30m (~A\$0.05ps) However, we suggest that as the project is further de-risked, with the path to commercialisation (funding, selling price, offtake tonnage, margins, timeframe) more visible, this project also offers significantly higher upside potential. Risks to our earnings profile and target price include, operational performance at the Mt Marion Lithium Mine, spodumene and AUD:USD exchange rate volatility, project development at the WA LiOH and Barrambie Ti-V Projects, and development of the group's portfolio of lithium processing/technology projects.

Share Price: A\$0.32

Target Price: A\$0.43

Recommendation **Speculative Buy**

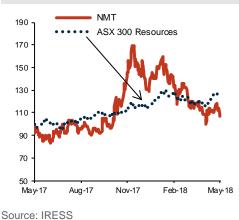

Risk Assessment Higher

Resources – Lithium
