International crude oil prices collapse

Brent crude oil prices have fallen by almost a half since January 2020 to just under US\$36/bbl on the back of a slow-down in global energy demand as a result on the ongoing coronavirus (COVID-19) outbreak, and a concomitant step up in supply. Prices fell by 9% on Friday 6 March on news that marathon talks at Opec's headquarters in Vienna collapsed when Russia refused to join an Opec plan to cut supplies. In trading today (Monday 9 March), Brent has so far fallen by a further 20% to ~US\$36/bbl in response to Saudi Arabia, the world's top oil exporter, stating that it will step up crude oil production from next month. Other Opec producers, such as Iraq, Kuwait and the UAE, are expected to follow Saudi Arabia's lead.

Valuation and Recommendation. A\$0.25ps (A\$0.26ps previously)

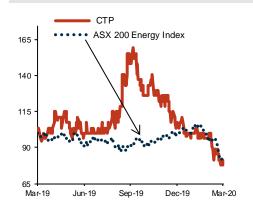

Considering the sudden deterioration in the international crude oil price environment, we have downwardly revised our forecast Brent crude oil price for FY20E by 15% to US\$52/bbl from US\$61.50/bbl. We also assume a significantly weaker (-28%) oil price of US\$45/bbl in FY21E (vs our previous FY21E forecast of US\$62.73/bbl). Mitigating this, we assume a weaker AUD/USD exchange rate of US\$0.68 in FY20E (US\$0.70 previously) and US\$0.66 in FY21E (US\$0.70 previously). With (only) 12% of CTP's revenues derived from oil sales - the bulk of revenue being derived from natural gas sales into the domestic market - CTP is largely insulated from oil price moves. The net impact of our downwardly revised A\$ oil price forecast has moderately lowered our NPV valuation for CTP's 2P Reserves (Mereenie Oil and Gas Field) by 4% to A\$110m from A\$115m. Underpinned by this valuation, we forecast CTP's SOTP enterprise value at A\$246m. Adjusted for forecast net debt of A\$53m in FY20E, we calculate CTP's equity value at A\$192m (equivalent to A\$0.25 per diluted share). Recommendation: Buy (Higher Risk).

We believe that CTP offers exciting capital upside for investors on the back of an expected uplift in financial performance from the group's producing assets, with significant upside potential on the back of a rerating in Project Range as the CSG Resource is converted to Reserves. In addition, CTP's CY2020 exploration programme has the potential to significantly increase the group's Resource base.

Recommendation & Risks

At current share price levels of A\$0.10, CTP offers significant upside relative to our SOTP valuation of A\$0.25. **Recommendation: Buy (Higher Risk).**

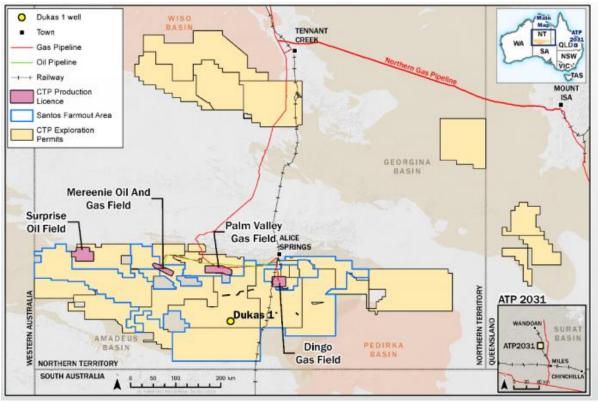

Risks to our estimated target price and forecast earnings profile include, but are not limited to:

- Commodity prices specifically the domestic (east coast) gas price and the international crude oil price (translated into Australian dollars). With gas accounting for some 96% of PJe sales volume and 88% of revenue, CTP's earnings profile is particularly sensitive to the domestic gas price environment. At forecast average annual gas production/sales of 13.5PJ, we calculate that a A\$1/GJ increase/(decrease) in the average received gas price (relative to our base-case ARP forecast of A\$5/GJ) will increase / (decrease) gas revenues by A\$13.5m (+/-19%). While east coast domestic gas prices are currently under pressure, we believe that in the medium to longer term, underlying tight supply/demand conditions will support a robust price environment. We believe that our base-case ARP forecast is conservative and could surprise on the upside.
- **Production profile**. Our base case forecast assumes (1) steady-state annual production of 14.1PJe based on annualised September 2019 quarter output of 3.5PJe and (2) A\$10m in annual sustaining capex to support this level of output. Reservoir/field performance is subject to operating and subsurface uncertainty; lower than forecast production and sales and/or higher than forecast sustaining capex will reduce CTP's earnings profile and target price.
- Access to pipeline infrastructure. The increase in sales volume from 2H FY19 was due to CTP successfully securing capacity in the newly built 33PJpa NGP. Any increase in production levels above the current level of 14PJpa from new NT discoveries or field developments will most likely require CTP securing additional pipeline capacity. While the NGP has 20% (7PJpa) spare capacity at present, the pipeline owner Jemena is currently in negotiations to fill this. Thus, without securing additional pipeline capacity, future NT resource discoveries could be "stranded", reducing their value.
- **CY2020 exploration program**. Some 13% of our SOTP valuation is from forecast Resources stemming from a proposed CY2020 exploration program. The exploration program may not result in a favourable result relative to expectations. In addition, CTP intends to fund the A\$51m program through a formal farmout process with a target completion in mid-2020. There is no guarantee that the farmout/sell-down process will be successful or will be completed in the targeted timeframe.
- Financial / Debt. CTP has successfully extended the group's A\$72.8m finance facility out to 30 September 2021 – when it is due is full. Refinancing the debt facility after this date is not guaranteed, or the conditions could be onerous.
- Other. Regulatory or compliance change, environmental and social licence to operate, key personnel risk, change in tax or royalty environment.

Assets

Over the past five years Central Petroleum (ASX: CTP) has built up equity interests in a significant portfolio of conventional oil and gas production licenses and exploration permits, largely located in the Northern Territory, plus a 50% interest in a coal seam gas (CSG) Authority to Prospect (ATP) license (ATP 2031, the Range Gas Project) in the Surat Basin, Queensland.

Source: Company, compiled by State One Stockbroking. Note: PJe = Petajoule equivalent, with oil converted at 1bbl = 6GJ gas

Following the August 2019 announcement of a NSAI certified maiden 2C Resource of 270PJ (135PJ net to CTP) at the Range CSG Project in Queensland, we calculate CTP's total Resource (2P+2C) at 390PJe.

CTP's Resource is very much gas-based; we calculate that some 97% of the group Reserve is gas, with gas accounting for a higher 99% of the total Resource (2P+2C).

Producing

Mereenie Oil & Gas Field - Northern Territory

(CTP - 50% interest (and Operator), Macquarie Mereenie Pty Ltd - 50% interest)

The Mereenie oil and gas field was discovered in 1963 and commenced production in 1984, delivering hydrocarbon liquids for sale in South Australia and gas to Northern Territory markets. CTP's 50% interest was acquired from Santos (ASX:STO) in September 2015. In 2019 the Northern Gas Pipeline (NGP) commenced operations, enabling Mereenie gas to access the east coast market for the first time. As a result, sales volumes increased to 7.68PJe (CTP share) in FY19 from 4.6PJe in FY18. September 2019 quarter (1Q FY20) production declined to 40.1TJ/d (100% JV) from 48.3TJ/d in the June 2019 quarter (4Q FY19). To mitigate ongoing field decline, a campaign of targeted recompletions (targeting new potential hydrocarbon formations) is being planned. Timing for conversion of injector wells to production wells, and new development wells, to optimize field production capacity is also under consideration.

Palm Valley Gas Field - Northern Territory

(CTP - 100% interest)

Acquired from Magellan in April 2014. Production ceased in FY16; in FY19 the field was successfully restarted to deliver gas into the broader gas market available via the NGP connection. Production in FY19 (1.9PJ) was however less than anticipated and resulted in a downward adjustment to reserves (to 2C from 2P). The focus is now on increasing field production capacity through the installation of either additional compressors or via reconfiguring the existing compressors. September 2019 quarter (1Q FY20) production increased to 9.4TJ/d (100% JV) from 8.7TJ/d in the June 2019 quarter (4Q FY19).

Dingo Gas Field – Northern Territory

(CTP - 100% interest)

Acquired from Magellan in April 2014 with development completed in April 2015. The field was developed to supply 1.55PJpa (31PJ over 20 years) to the Owen Springs Power Station. While offtake is running below this (0.8PJ in FY18, 0.9PJ in FY19) CTP is entitled to payment for the difference via a "Take or Pay" provision in the supply agreement. Owen Spring Power Station gas consumption is increasing as commissioning progresses and in the September 2019 quarter, Dingo gas field production/sales increased to 3.3TJ/d (or 1.2PJ annualised).

Development

Range Gas Project (ATP 2031) - Queensland

(CTP – 50% interest, Incitec Pivot Queensland Gas Pty Ltd ("Incitec") – 50% interest)

In August 2019, CTP booked a maiden 2C contingent gas resource of 270PJ (100% basis). Completion of pre-FID activities, including an appraisal pilot commencing in 1Q CY2020, will look to upgrade the 2C Resources to 2P certified reserves. The permit area covers 77km² in Queensland Surat Basin

and is adjacent to a number of producing and developed CSG wells. We note that in February 2019, Australia Pacific LNG acquired Origin's Energy's 129PJ 2P Reserve Ironbark Gas Project - located some 100km south-east of Project Range - for US\$165m of A\$1.79/GJ. A similar acquisition metric would value CTP's interest in Project Range at A\$242m.

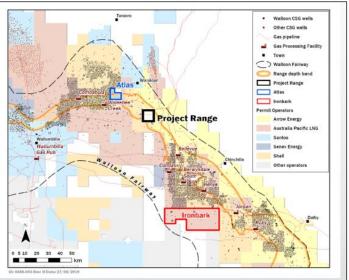

Figure 7: Range Gas Project (Surat Basin, QLD)

Project Range acreage is 77km² with 270 PJ 2C Resource* surrounded by major CSG developments and infrastructure

Other nearby recently reported CSG projects1:

- The Ironbark Project² recently traded at \$231M with last reported reserves of 129PJ 2P, 192 PJ 3P
- The Atlas Project ³ acreage is 58km² and currently in development. Senex has reported 144PJ of 2P reserves over approx. 44km2

view report on sale to Australia Pacific LNG 20 February 2019 3) Senex Energy Limited FY19 full year results and reserves statement 20 August 2019

* Resources are as at 15 August 2019 and were independently certified by Netherland, Sewell & Associates; 135PJ 2C net to Central. These resources were first reported to the market on 20 August 2019. PJs rounded to nearest full PJ. Central Petroleum Limited is not aware of any new information or data that materially affects the information included in this presentation and that all the material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed

Source: Company

Exploration

Dukas-1 (EP112) – Northern Territory

(CTP - 30% interest, Santos (and Operator) currently 40%, earning up to 70%)

The Dukas-1 well was spudded in April 2019 and suspended in September 2019 due to high formation pressures (>10,000psi) at a depth of ~3,700m some 100m short of its target, the sub-salt section of the Amadeus Basin. Further technical work, including finalizing well design and data interpretation is required to formulate a definitive forward plan but CPT indicate that, at this point, a return to Dukas-1 (operated and fully funded by Santos) is unlikely before 2021.

2020 exploration plan

Following connection to the east coast gas market via the NGP in January 2019, CTP's Northern Territory exploration assets now have a pathway to a new market. Recognising this new market dynamic, CTP has significantly augmented its exploration capabilities, including a new GM exploration (April 2019) and a new experienced Reservoir Engineer (March 2019). While the Dukas-1 2019 drilling program was disappointing - in terms of technical difficulties encountered - the Amadeus Basin remains largely unexplored, is a large structure with multi-TCF gas potential, and will be the target of a significant (A\$51m) exploration program in 2020.

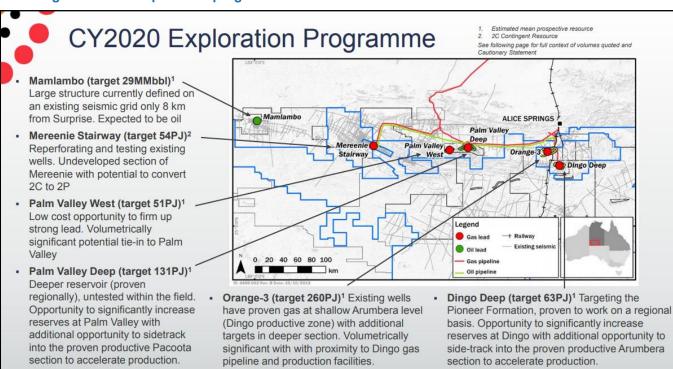

The CY2020 exploration program (announced in October 2019) consists of five (5) drill-ready low to moderate-risk brownfield targets, close to existing CPT production facilities and infrastructure, in 100%-owned CPT tenements.

This information is provided for information purposes only and not to make an analogy to Project Range. These other projects are in differing stages of development with different economics and assumptions.
2) The Australian Financial Re

Management estimates the P50 aggregate prospective Resource contained within the prospects at 465PJe (321PJ gas and 24MMbbl oil). This is more than CTP's current 2P+2C Resource base of 390PJe.

On a risked-basis, CTP estimates an aggregate prospective Resource of 262PJe (205PJ gas and 9.5MMbbl oil). In addition, the program aims to provide a potential pathway to convert 54PJ of 2C Resources (CTP interest) to Reserves with a targeted Mereenie Stairway appraisal program.
